

ENVIRONMENTAL POLICY

AMD is committed to leading the industry in minimising the impact of its activities on the environment. It recognises the importance of complying with all laws, regulations and guidelines by meeting or exceeding all the environmental legislation that relates to the Company.

The key points of its strategy to achieve this are:

- Planning and decision-making processes will ensure that environmental policies and performance standards are adhered to.
- The Company will continue to endeavour to apply principals and practices to improve the impact on the environment.
- AMD commits to being open and responsive to the environmental concerns of our employees, customers, government agencies and the public.
- We will provide clear and candid information about the environmental impact of our services and operations.
- The company will endeavour to minimise waste generation by evaluating operations and ensuring they are as efficient as possible.
- We will promote energy efficiency, try to minimise the use of hazardous materials, and promote recycling and re-use.
- The Company will pursue appropriate solutions to any contamination or generation of any chemical and solid waste, which might result from working on a site.
- Minimise toxic emissions through the selection and use of its fleet and the source of its power requirement.
- Employees are educated and encouraged to be environmentally aware and responsible when working on site.

AMD is taking steps to implement an Energy Management Plan. Its commitment is to make it the organisation's policy to use energy efficiently and to keep carbon dioxide emissions to a minimum wherever possible. This would help reduce and negate the organisations contribution to climate change.

The Company endeavours to communicate this policy throughout the business and is committed to reviewing it annually.
